EXHIBITION  
CATALOG**

ERGONOMICS, QUALITY AND INCREASED PRODUCTION  
THROUGH  
ADVANCED TECHNOLOGY

Atlanta Attachment Company has come of age with the distribution of this, our 25th anniversary catalog. It has been an overwhelming experience to see our company grow from a garage shop in 1969, to the present 80,000+ square foot, state-of-the-art manufacturing facility with over 175 employees.

We owe our success and the growth of Atlanta Attachment Company to you, our customers, our many friends in the supply industry, and our valued and loyal employees.

With this thought in mind, we rededicate ourselves to continuing the development and manufacture of the highest quality automated workstations, folders, attachments and labor saving devices available to

the sewn products industry.

We are committed to maintaining and improving our policy of "Sudden Service", so our customers may also prosper in this competitive global market.

We invite you to review this catalog and use it for reference. Please call or fax for immediate response to all your production needs.

**"SUDDEN  
SERVICE"®**

has been our motto for 24 years and is more important than ever. We invite you to look over the enclosed literature and contact us for additional information.

Mr. "SUDDEN SERVICE"

*Clair C. Price*  
**CHAIRMAN & CEO**

**"NO ONE EVER ACHIEVES SUCCESS WITHOUT THE HELP OF OTHERS"**

With this thought in mind we gratefully dedicate this booklet to you, our customer, our many friends in the supply industry, and our valued employees.

# Atlanta Attachment Company Statement of Corporate Vision

e will be primarily a manufacturer and provider of products and services to our customers which are of high quality and provide overall value for their investment.

We will be noted for the delivery of these products and services on a timely basis.

We will make use of advanced technology where practical and economical.

The highest standards for material selection appropriate to the product/service will be maintained.

We will strive to provide a work environment of integrity, respect and dignity for employees and all whom come in contact with our business.

Employees will be recruited and maintained who are creative, technically competent and productivity oriented.

Management systems and processes will be developed and maintained which emphasize team work, a high level of quality assurance and flexibility.

We will be a profitable company and distribute this wealth in fair and equitable ways after sufficient reinvestment for necessary long term company growth.

We will be responsible to the environment and to the communities within which we do business.

We will diversify into various markets and product lines in order to leverage our expertise, balance our work demands, provide new opportunities for growth and hedge against downturns in any one industry.

Elvin C. Price  
Chief Executive Officer

There are many ways one can express thanks or gratitude, verbal, written, gifts, etc. As we were in the process of preparing this, our largest catalog ever, many of our partners came to mind. How can we say thanks and what can we do to express our gratitude?

After much discussion, it was a unanimous decision. We feel the best way to say a special thanks is to rededicate ourselves to the original commitment, a commitment to giving you quality, state-of-the-art products, and support with our unequalled "SUDDEN SERVICE."

Yes, to us at Atlanta Attachment, it is more than words, it is more than a logo, it is the fundamental belief of our company.

Atlanta Attachment has recently taken the steps to meet your needs in Mexico, the Caribbean, Central and South America. Our international division is now fully operational in our Miami facility—ready, willing and able to move forward with you into these markets. The international division has shown record-breaking growth over the last year, and we look forward to sharing with you the same partnerships in these new markets.

In closing, many thanks to you for these many years, and we, indeed, thank you for the promise of an exciting future together.

EXECUTIVE VICE PRESIDENT

# "SUDDEN SERVICE"®

Atlanta Attachment Company is the recognized sewn products industry leader in automated workstations, labor saving devices, folders and ergonomic risk reduction. The Company, founded in 1969, has made its policy of "SUDDEN SERVICE"® a way of life in all aspects of operation. Our entire staff is dedicated to providing three day shipments of most custom folders and attachments. Special gauge sets and other work aids are available in 10 working days or less.

Call our expert sales staff for "SUDDEN SERVICE"® on all your sewing needs.

## AUTOMATIC TWO NEEDLE SLEEVE HEMMER

**DESCRIPTION:** An electronically controlled workstation consisting of a conveyORIZED downturn hemming apparatus with two or three needle bottom coverstitch sewing head, electronic motor, automatic edge trim and cut apart, and self contained waste disposal.

**OPERATION:** The operator places parts to an edge guide and initiates sewing. The unit will continue sewing as long as parts are placed on the conveyor within a specific distance. The sew cycle will stop if the operator fails to position the next part, thereby reducing thread waste. Average production on sleeves is 350-400 Dozen pair per 8 hour day. Optional elements include stacker, fold in half and stack, and bottom hem stacking modules.

**MACHINE CLASS:** W & G 664 YAMATO VC 2700

**OPTIONS:** Stacker, Fold in half and stack, and bottom hem stacking

# ELASTIC METERING DEVICE

The "SUDDEN SERVICE"® Company can supply our AP-17 Upper or AP-18 Lower Metering Device from stock. It can be installed by your maintenance personnel in approximately 30 minutes.

**AP-17**

The advantages are:

- Consistent measurements
- Greater production
- Quality garments
- Low cost
- Up to 2½" elastic may be used
- Gear belt drive, no slip

**AP-18**

- Available for all machines: overlock, cover stitch, multi-needle, etc.
- Quickly installed or moved to other machines
- Zero-max drive eliminates the over-throw and inconsistent measurements found in clutch-type metering devices
- Maximum speed of the machine may be utilized

# DON'T LET PLUNGING NECKLINES RESULT IN PLUNGING PROFITS

V-NECKS, ROUND COLLARS, BOTTOM BANDS, CUFFS, ETC., CAN BE ATTACHED WITH THE AP-22 VARIABLE SPEED METERING DEVICE FROM ATLANTA ATTACHMENT COMPANY.

Our attachment dispenses collar, cuff or bottom band tape to an overlock machine from a roll with the desired tension, or without any tension at all.

- \* "V" neck shirts with both shoulders closed, label and collar set in one operation.
- \* Sweetheart collars with both shoulders closed, label and collar set in one operation.
- \* Round collar shirts with one shoulder open, label and collar set in one operation.
- \* Adjustable folder accepts rolls cut 2"-10". Eliminates waste (cut too narrow, cut too wide)
- \* Cuff/collar measurements consistent.
- \* Swings out for machine threading and maintenance.
- \* Installs in 45 minutes on any overlock.
- \* Training time reduced.
- \* Improves quality of the garment.
- \* Low purchase price = quick pay back

Contact us today for a demonstration in our showroom using your material.

# IF YOUR PLY SHIFT FEEDING PROBLEMS

ARE **BIG**

**SMALL**

Atlanta Attachment Company  
has the answer with our Model  
AP-39 Belt Feeding System.

- Plies feed out evenly
- Starts plies evenly on heavy and bulky material
- Cross seam and piping without short stitches and damage to the material
- Eliminates pucker and distortion caused by presser foot drag
- Full speed of machine may be utilized
- Top feed has an infinite speed range
- Presser foot swings out and raises normally
- Sews contours and curves. Standard shirring or cord piping attachment may be used.

**OR COMPLEX**

- Top belt feed does not interfere with machine threading.
- Available for all brands of overlock and safety stitch machines
- Delivery: 7 - 10 days

## AUTOMATIC RIB KNIT CUFF SETTING STATION

### DESCRIPTION:

An electronically controlled cuff setting station, this unit is designed to form rib knit tape up to 8 inches wide into a cuff band and sew the band onto the sleeves. The station consists of an interchangeable sewing head and power console, tape feeding device, automatic cut apart knife, conveyor with automatic stacker, and a bundle return conveyor. An optional air lift table and/or loading conveyor are available. Rolled or festooned rib knit tape may be fed from top or bottom.

### OPERATION:

The operator places the sleeve at the presser foot and the material is sensed, sewing is then automatically started. The trailing edge of the sleeve is sensed and the cuff is cut apart. The finished sleeve is carried to the stacker by the upper conveyor. The operator loads sleeves continuously. If for any reason another piece is not loaded, the sewing will automatically stop, saving material. At the completion of a bundle, a manual switch may be pressed to return the bundle to the operator.

**MACHINE CLASS:** All industrial safety, overlock or coverstitch machines.

## MORE CUFFS . . . LESS COST

Reduced labor and save fabric in your leg cuffing operation with Atlanta Attachment's Model AP-24. The Model AP-24 is a precision built workstation that consistently delivers top quality cuffs on pant legs.

- # Sews more than 350 dozen garments per 8 hour day
- # Indexes bundles automatically
- # Requires minimal operator training
- # Available for overlock and coverstitch machines

The workstation features a variable speed tape feeder that ensures correct gathering and minimum side tape trim of 1/8". Tandem variable speed pullers and precise automatic cut apart saves tape between pieces.

# MODEL AP26S

## AUTOMATIC BACKLATCH SYSTEM

**DESCRIPTION:** A pneumatically controlled and operated system consisting of a custom patented throat plate, chain cutting knife, vacuum generator and control package. This unit draws the overlock chain into and through the patented hollow chaining tongue and allows it to be sewn into a seam as the seam is sewn. The chain cutting knife is activated by a knee or heel switch at the completion of sew.

**OPERATION:** The operator folds and places the part to be sewn at or under the presser foot in normal fashion. As the sew threadle is depressed, the automatically controlled vacuum generator draws the chain from the previous piece toward the operator and the chain is sewn into the seam. Upon completion of sew, the operator draws the piece to the rear of the unit and cuts the chain by depressing a knee or heel switch. The amount of chain which remains is automatically drawn into the chaining tongue to form the backlatch for the next piece.

**MACHINE CLASS:** Most industrial overlocks.

**OTHER MODELS:** AP26, AP261, AP26Q

# SLEEVE CLOSING STATION WITH AUTOMATIC BACKLATCH DOUBLES PRODUCTION !!!

## 100%

**Production increase compared  
to manual backlatch reported by  
major installations**

The operator takes a hemmed or cuffed sleeve from a stack and folds in half lengthwise. As the sleeve is positioned under the presser foot, an electric eye detects the leading edge and the automatic cycle is initiated. The sleeve is closed with automatic backlatch, the trailing edge is sensed and the thread chain is cut as the part is carried rearward and stacked. The sleeve is released as soon as sewing begins which allows the operator to pick up the next part in preparation for the next cycle.

*Model AP261*

- # Automatic Backlatch (Patented)
- # Automatic Ply Alignment and guiding
- # Automatic Cycle
- # Automatic Chain Cutter
- # Automatic Thread saver
- # Automatic Takeaway and Stack
- # Minimal Operator Training

## AUTOMATIC BACKLATCH SLEEVE CLOSING STATION US & Foreign Patents Apply

**DESCRIPTION:** An electronically controlled sleeve closing station consisting of an integrated stand, stand up work table, pneumatic edge guide system, electronic controls, and overlock sewing head with automatic backlatch (patented), chain cutter, take away conveyor and stacker. This unit is designed to handle sleeves in a wide range of sizes and materials without adjustment.

**OPERATION:** The operator takes a hemmed or cuffed sleeve from a stack and folds the part in half lengthwise to roughly align the edges. She then aligns the cuff ends and loads the two plys into the pneumatic edge guide. As the sleeve is positioned under the presser foot, an electric eye detects the leading edge and the automatic cycle is initiated. The sleeve is closed with automatic backlatch, the trailing edge is sensed and the thread chain is cut as the part is carried rearward and stacked. The sleeve may be released as soon as sew begins allowing the preparation of the next part during the sew cycle.

**MACHINE CLASS:** Most Industrial Overlocks.

## AUTOMATIC BACKLATCH SLEEVE CLOSING STATION US & Foreign Patents Pending

**DESCRIPTION:** An electronically controlled sleeve closing station consisting of an integrated stand, stand up work table, pneumatic edge guide system, electronic controls, and overlock sewing head with automatic backlatch (patented), chain cutter, takeaway conveyor, vacuum sleeve turner and stacker. This unit is designed to handle sleeves in a wide range of sizes and materials without adjustment.

**OPERATION:** The operator takes a hemmed or cuffed sleeve from a stack and folds the part in half lengthwise to roughly align the edges. She then aligns the cuff ends and loads the two plys into the pneumatic edge guide. As the sleeve is positioned under the presser foot, an electric eye detects the leading edge and the automatic cycle is initiated. The sleeve is closed with automatic backlatch, the trailing edge is sensed and the thread chain is cut as the part is carried rearward, vacuum turned and stacked. The sleeve may be released as soon as sew begins allowing the preparation of the next part during the sew cycle.

**MACHINE CLASS:** Most Industrial Overlocks.

**OTHER MODELS:** AP26, AP26S, AP26Q

## Model AP265

# Automatic Backlatch Leg Closing Station

US & Foreign Patents Apply

### Description:

An electronically controlled leg closing station consisting of an integrated stand, stand-up work table, pneumatic edge guide system, electronic controls, and overlock sewing head with automatic backlatch (patented), chain cutter, take-away conveyer and stacker. This unit is designed to handle legs in a wide range of sizes and materials without adjustment.

### Operation:

The operator takes a hemmed or cuffed leg from a stack and folds the part in half lengthwise to roughly align the edges. She then aligns the cuff ends and loads the two plies into the pneumatic edge guide. As the leg is positioned under the presser foot, an electric eye detects the leading edge and the automatic cycle is initiated. The leg is closed with automatic backlatch, the trailing edge is sensed and the thread chain is cut as the part is carried rearward and stacked. The part may be released as soon as sew begins, allowing the preparation of the next part during the sew cycle.

**Machine Class:** Most Industrial Overlocks.

# SCISSOR FREE SEWING ROOM ??

## IT'S POSSIBLE WITH OUR MODEL AT116 PROGRAMMABLE FAST ACTION KNIFE

The model AT116 will cut continuous sewn material such as binding, tape, etc. without stopping the sewing machine. The unit may be programmed to provide flush cuts on either or both ends of a garment, leave tails for turn back and tack, form tie and apron strings, cut and sort belt loops, or any of six other operations or combinations. The multi-function feature allows an operator to perform up to four separate operations on a garment without having to reprogram between operations as program switching occurs automatically. Automatic stop is included to minimize material waste. Sequences, stitch count, and cut values are easily changed and stored on the keypad control with LCD digital readout.

**APRON TIE STRINGS**

# MODEL AT116

## PROGRAMMABLE FAST ACTION KNIFE

**DESCRIPTION:** An electronically controlled pneumatic scissor type knife designed to cut apart and/or trim continuous sewn material such as binding, belt loops, waistbands, etc., up to 1 1/2 inches wide. This unit consists of a fast action toggle link knife, a keypad programmable control box with LCD read-out, edge sensing and stitch count capability, and automatic stop to prevent material waste.

**OPERATION:** The operator selects any programmed function by pressing numbers on the keypad (the stitch count and cut functions are clearly visible on the LCD read-out). Each sequence may be inspected or altered by following the program sequence. For example, program one, cut leading and trailing edge with automatic binding saver: Material is inserted into a binder and depressing the sew treadle initiates sewing, a reflective eye senses the leading edge and the binding is cut after a preset number of stitches without stopping. Sewing continues until the trailing edge is sensed and after counting the preset number of stitches the binding is cut and sewing is automatically stopped to prevent material waste. Any number of cut and trim values may be entered and retained for different styles and sizes or may be combined in the multi function feature of Function 10.

**MACHINE CLASS:** Most industrial machines

**APPLICATIONS:** Binding, Taping, Belt loops, Apron strings, Cap sweat bands, collarettes, etc.

# DON'T LET YOUR BUSINESS SLIP AWAY . . .

THE WALKER TAPE FEEDER CAN HELP  
YOU ELIMINATE EMBARRASSING  
MOMENTS LIKE THIS.

The Walker Tape Feeder is a dispensing device for all types of zipper chain, lace, elastic or other trims.

The tape feeder unit keeps slack in trim and delivers it to the sewing machine in a relaxed condition. This eliminates inconsistent measurements for garments with elastic and increases production because there is no wasted trim or time. So, stop worrying about YOUR problems and start using OUR solution.

Call or write for more information on the time-tested (25 years), dependable WALKER TAPE FEEDER.

Adaptable to all sewing machines.  
(Available in 110 Volt or 220 Volt.)

*Walker Fabric Controls is a wholly owned subsidiary of ATLANTA ATTACHMENT COMPANY*

# MODEL 273-4

## COLLAR SETTING AND TAPING

### DESCRIPTION:

A pneumatically controlled collar taping folder designed to shift to the left to insert the tape under the presser foot. Upon signal, the folder shifts to the right to allow the tape to be cut by the edge trimming knife. The tape does not extend to the edge of the corners of the placket on either end. Therefore, when the placket is turned, there is no bulk or additional thickness. This improves the overall appearance and reduces problems in the button hole and button sew operations.

### OPERATION:

The collar is aligned to the shirt body. The placket is folded over the leading edge of the collar and placed under the foot. The pieces are sewn approximately 1/2 inch and a touch of the knee switch shifts the folder to the left and taping starts. As the trailing edge of the collar nears the machine, the operator folds the placket over the collar and touches the knee switch. At this point the folder shifts to the right and the tape is cut by the edge trimming knife. (See illustration below)

**MACHINE CLASS:** Most industrial overlocks

## CLEAN FINISH ELASTIC WAISTBAND STATION

**DESCRIPTION:** An electro-pneumatic clean finish waistband station consisting of a multi needle sewing machine\*, motor, stand, spiral elastic guide (350-12), three blade rotary knife (for cut apart) and variable speed conveyor and metering device.  
(\* = Sewing head provided by customer)

**OPERATION:** The operator presents the flat garment to the edge guide and into the spiral folder. An electric eye senses the leading edge and starts the sew cycle. The operator holds the garment against the edge guide until completely into the folder. The electric eye senses the trailing edge and stops the sew cycle leaving the proper spacing for the next garment to eliminate waste. The operator then picks up the next garment and repeats, the conveyor will carry pieces to the knife for automatic cut apart and then to the disposal area.

**MACHINE CLASS:** All industrial multi needle chainstitch machines. (Special gauge parts are available)

**OPTIONS:** Components may be purchased separately  
(A) Spiral elastic guide and folder  
(B) Variable speed metering device  
(C) Three blade knife (cut apart)  
(D) Conveyor stand length 40" (60" available)  
(E) Thread break detectors  
(F) Elastic detectors

## SPOT ELASTIC ATTACHMENT

### DESCRIPTION:

A semi-automatic device designed to produce a spot or partial elastic waistband. The unit consists of upper and lower folders, or upper downturn hemmer and lower cover band folder, elastic feed and tension mechanism, and elastic cutting knife. Elastic may be inserted between two piece waistband or top downturn hemmer and bottom band.

### OPERATION:

The operator heels the treadle to lift the presser foot, presents the garment under the foot and sews to a predetermined point (notch, mark, pocket hem, etc.), pressing the knee switch activates the feed cycle which momentarily lifts the presser foot and tension bar for elastic insertion. As sewing continues the elastic is automatically metered. As the point where gathering is to end is neared (approximately 2 inches), touching the toe switch cuts the elastic, continuation of sew draws the elastic from the metering device as the flat band is completed.

**MACHINE CLASS:** Most industrial multi needle machines.

**OPTIONS:** Garment cut apart knife, partial or fully automated with electronic motor and controls.

*Video tape available **FREE** upon request*

# MODEL 1278-4

## CIRCULAR CLEAN FINISH WAISTBAND STATION

**DESCRIPTION:** An electro-pneumatic device consisting of expansion roller guides, two position folder, power feed package and air control package designed to sew preclosed elastic loops inside a closed garment to produce a clean finish circular elastic waistband.

**OPERATION:** The pre-sewn elastic loop is inserted inside the closed circular panel to a depth equal to the width of the elastic plus 3/8" to 1/2" for fold under. The operator touches the air foot switch to collapse the guide rollers, heels the sew treadle to lift the presser foot. The garment is inserted over the rear roller, under the foot and over the front roller. Depress the air foot pedal to expand the roller. A touch of the knee switch shifts the clean finish folder to the right and the operator tucks the fold under material with the fingers of the right hand. A touch of the toe switch draws the garment through the folder 5 to 7 inches to assure a clean fold. The garment is sewn to the point where stitching began. A press of the knee switch opens the folder and allows sew over of the starting stitches. Heeling the treadle actuates the undertrimmer and footlift\*. A touch of the air foot pedal collapses the rollers for unloading.

\*Machines without undertrimmer will have foot lift and position only. Optional thread chopper or multi needle undertrimmer available.

**AIR REQUIRED:** .05 SCFM @ 60 PSI

*Video tape available **FREE** upon request*

## AUTOMATIC CIRCULAR ELASTIC TOP STITCH STATION

**DESCRIPTION:** An electronically controlled circular elastic waistband top stitching station. The station consists of multi needle chainstitch sewing head with built in undertrimmer, set of easily adjustable expanding rollers, electronic control module, electronic positioning motor, and a custom stand up table.

**OPERATION:** The operator places the waist of the garment around the collapsed rollers and under the presser foot. Pressing the foot switch expands the rollers which stretches the waistband to the proper size for sewing. Pressing the "start" button lowers the presser foot and starts the sewing cycle. The control module counts stitches while sewing around the waistband and stops automatically with the required overlap, undertrimmer actuates, presser foot is raised, the guide rollers are collapsed and the garment is automatically unloaded and stacked. Size adjustments can easily be made by setting thumbwheel switches.

**MACHINE CLASS:** All industrial multi needle machines with built in undertrimmers.

## MODEL 1278-5S

### AUTOMATIC CIRCULAR ELASTIC SETTING STATION

**DESCRIPTION:** An electronically controlled circular elastic loop setting station. This unit consists of a 3 or 4 thread overlock head with vacuum trimmer. Easily adjustable expansion rollers, electronic positioning motor & ergonomic stand-up tabling.

**OPERATION:** The operator places a pre-sewn elastic loop under the presser foot and over the collapsed rollers. The circular garment is then loaded over the elastic loop and rollers—a touch of a toe switch expands the guide rollers and final parts alignment is made. A push of the start button drops the presser foot and roller and automatic sew begins. The sewn edge of the garment is shifted left and the roller is lifted after a pre-set stitch count. Sew continues to allow the chain to cut by the vacuum trimmer. Sewing stops and the presser foot is lifted as the guide rollers collapse automatically. A second unit is operated in the interim.

**MACHINE CLASS:** Cylinder arm top feed overlock.

## **Automatic Rib Knit Bottom Band Setting Station**

### **Description:**

An automatic workstation for setting bottom bands on sweaters, sweat shirts, etc. This unit incorporates a cylinder arm overlock sewing head with vacuum thread trimmer, electronic controls, automatic guidance and pneumatic expansion rollers and automatic stacker.

### **Operation:**

A circular rib knit band is folded in half and loaded over the expansion rollers. The tubular body is then loaded on top of the band and the operator depresses the start button. The rollers expand and the stepping motor driven puller automatically moves the parts for positioning under the presser foot. The foot drops and sewing begins. Sew continues until a pre-set number of stitches are counted. The thread chain is then cut and the completed part is automatically stacked. The operator is free to load a second machine during the sew cycle. This unit includes an automatic piece counter for pacing production.

## AUTOMATIC CUT APART ATTACHMENT

**DESCRIPTION:** An electro-pneumatic device consisting of a variable speed puller, an impact type cutter controlled by a single retro reflective eye, and a belt conveyor positioned to the side of the presser foot. This unit is designed to automatically cut raw rubber or narrow elastic between garment parts such as sweat pant legs.

**OPERATION:** The operator presents the material through a downturn hemmer and under the presser foot and depresses the machine treadle to sew. Each successive part is sewn with minimal gap to reduce elastic or rubber waste. The variable speed puller runs faster than the sewing speed and creates a larger gap. The retro reflective eye senses the leading edge of each part and automatically cycles the impact cutter to separate the parts. The side conveyor carries the leading edge to the puller and prevents the gathered material from jamming.

**MACHINE CLASS:** Most industrial machines

# MODEL 1800P

## Center Knife Gauge Set

### DESCRIPTION:

A retrofit Gauge Set with movable center knife to facilitate the cutting of pocket opening in panel and pocketing material. Knife begins to cut in front of sewing stitches and ends cut before sewing ceases. This differential in sew length versus cut length may be changed as desired.

### OPERATION:

The Operator places and pocketing material under presser foot, presses sewing treadle to begin sew cycle, the knife automatically shifts to the rear position after the beginning back tack is completed. The knife is reset to the front position upon completion of the finish back tack thread trim and footlift. A machine equipped with stitch count capability will allow the operator to press the treadle once to complete the cycle automatically.

### MACHINE CLASS:

## MULTI NEEDLE UNDERTRIMMER

US AND FOREIGN PATENTS APPLY

**DESCRIPTION:** An electronically controlled pneumatic operated knife which includes an automatic footlift and an electronic motor for needle positioning. This unit is designed to cut both needle and looper threads and is available for retrofit to most industrial 401 chainstitch machines up to 25 needles and any gauge.

**OPERATION:** At the end of each sewing cycle, the operator heels the sew treadle to position the needle up, lift the presser foot and puller, and actuate the trimmer to cut the threads. The sewn piece can then be removed. The Model 1904 undertrimmer will not effect the normal operation of the sewing machine.

**MACHINE CLASS:** Most industrial multi needle machines.

## **Model 3800P** **Automatic Set-In Pocket Workstation**

**Description:** An automatic station consisting of two-needle lockstitch sewing head with undertrimmer and programmable center knife gauge set. This unit features electronic controls and automatic garment transfer which allows simultaneous loading and sewing.

**Operation:** The part to be sewn, leg panel, shirt front, etc., is laid up and positioned to laser target lights. The pocketing is then laid on top of the panel and positioned to another set of lights. Depressing the start switch energizes the automatic cycle which transfers the parts to the sewing machine. The parts are then sewn, the thread is trimmed and the completed panel is stacked. The operator loads subsequent pieces during the sew cycle.
