

Automatic Short Sleeve Closing Workstation

- Auto start
- Auto bundle return
- Auto backlatch
- Auto thread cutter
- Patented Serial Bus Control System
- Electronic active edge guiding system
- Auto thread saver
- Auto piece counter
- Auto stacker
- Most industrial overlock machines

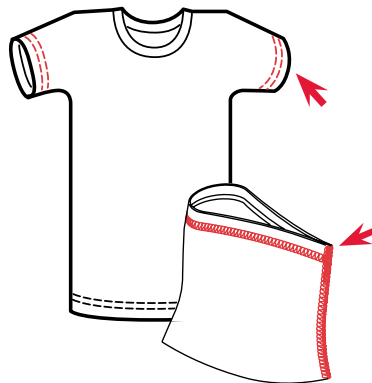

DESCRIPTION

An electronically controlled sleeve closing station with automatic backlatch designed to close short sleeve tee shirt sleeves. This unit includes our exclusive electronic active edge guiding system, providing the capability to sew either straight or contoured seams.

OPERATION

The operator folds the sleeve and presents it to the presser foot. A photo cell senses the beginning edge, drops the presser foot and begins the sew cycle with an automatic backlatch. The electronic active edge guiding system controls the sleeve during sewing, while the operator prepares the next sleeve. When the seam is completed, the machine stops, the thread chain is cut and the sleeve is stacked automatically. Stacker selection is available for either single or double stack.
